

Pro Soap Making Tips

EXPERT TIPS FOR BEAUTIFUL, HEALTHY, HANDMADE SOAPS

PRO SOAP MAKING TIPS

Don't overheat base (prevents sweating)

Melt soap base in short bursts and stir between each until just melted.

Use finely ground herbs for smoother bars

Finely ground herbs blend better and create a smoother, more professional finish.

Keep additives low to maintain firmness

Too many add-ins can soften soap. Use recommended amounts for best results.

Cure time is short—ready once hardened

Melt & pour soaps are ready once they harden (usually 1–2 hours).

Wrap tightly to avoid moisture exposure

Store in a cool, dry place. Wrap in plastic or paper to keep bars fresh and long lasting.

SAFETY NOTES

Keep essential oils within safe usage

Generally keep essential oils under 2% of total soap weight.

Avoid certain oils for sensitive skin

Strong citrus and cinnamon oils may irritate sensitive skin.

Patch test before use

Always test a small area of skin, especially with new ingredients or blends.

Label clearly if selling

List ingredients and any potential allergens on your product labels.
